

CDS801 + SDM500

The CDS801 + SDM500 solution is an integrated cash deposit solution designed for medium-high volume depots looking for reliability, ease of use and a significant reduction of the cost of cash.

Characteristics of this solution are the high capacity, the compactness and the high performance.

The possibility to choose among different kinds of deposit solutions makes it the more versatile solution in its range, meeting the most diverse needs of both the customers and the CIT.

FEATURES

- CIMA patented note validation module and coins sensors.
- In built touch screen or predisposed to fit a PC touch screen and a printer.
- Each driver's deposit is logged and can be easily reconciled against ticket sales data.
- Coin storage options include:
