

BCi-8 Business Change Solution

Our BCI-8 Business Change Solution is a self-service solution that enables business customers to buy change quickly, on demand and at their convenience.

In offline installations, this through-the-wall solution operates as a cash exchange machine, dispensing rolled and loose coins and small-denomination banknotes in exchange for high-denomination ones.

When integrated into a bank's network, the BCI-8 turns into a business-dedicated ATM and change orders are paid in account credit via bank card.

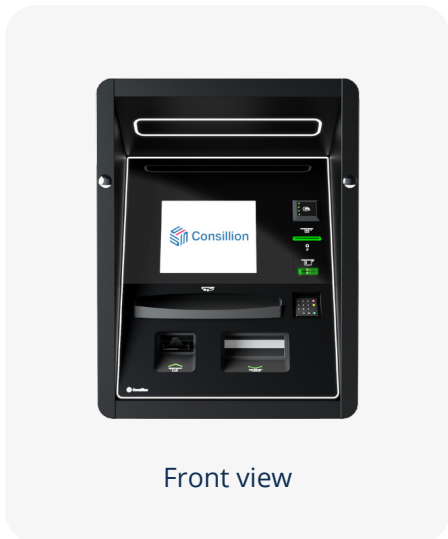

BENEFITS

- **MIGRATE CASH TRANSACTIONS TO THE SELF-SERVICE WALL**
The BCI-8 saves branch staff time, energy, and paperwork by automating all tasks related to processing change orders over the counter.
- **OFFER A QUICK AND SMOOTH EXPERIENCE TO YOUR CUSTOMER**
Customers no longer need to pre-order change well in advance or to queue up in branch during business hours. Now, they can simply pick up the change mix they need quickly and at their convenience, even on weekends and afterhours.
- **MINIMISE THE COST OF CASH**
Consillion reporting and monitoring platform offers status updates, transaction reports and inventory trends to optimise the procurement of cash and CIT visits. The BCI-8 enables a streamlined and efficient cash management process.
- **LOW COST OF OWNERSHIP**
Often offered as a chargeable service, the BCI-8 provides a swift operation and exceptional uptime, minimising your operational costs.

PROCESS

- 1. VERIFICATION:** To meet the bank's Know Your Customer requirements, Customers can verify themselves by inserting a valid account card in the card reader or entering their account details via touchscreen or keypad.
- 2. CHANGE ORDER:** Customers build their change order by selecting quantities and denominations on-screen. Then, they pay in banknotes for their change order. In online deployments, the total amount could also be charged directly to their account, working similarly to a business-dedicated ATM.
- 3. DISPENSE:** The BCI-8 dispenses rolled coins and notes by denomination, plus any change in loose coins if required.
- 4. ACKNOWLEDGEMENT:** The solution prints a unique receipt, including branch details, account ID, timestamp and a breakdown of the cash dispensed by denomination.
